Dear Adi,

I would like to thank you and your team for all your support in helping PriMed physicians convert to the use of NICaS ICG technology. PriMed Physicians has been using impedance plethysmography technology for over 10 years to guide treatment for Hypertension. Our results have led the nation with over 90% of patients treated to goal. The NICaS ICG technology has been much easier to use, takes less time, is accurate and greatly accepted by patients. The physiologic measurements and data provided by the NICaS ICG have greatly assisted our physicians in choosing to start the most appropriate medication and in making adjustments in patients with more resistant hypertension. A great unexpected benefit has been the patient's engagement and understanding of their hypertension as they can finally "see their blood pressure". Often, patients are anxious to see their follow up ICG test after medication has been started. The printouts of the ICG results are very clear and easy to explain to patients and they really want to "see" and know their blood pressure is in the safe zone. The mystery of someone else hearing their blood pressure is diminished as there blood pressure and its change with medication is so visible now. PriMed Physicians continues to have tremendous results in treating hypertension and are in the midst of developing a process to more proactively treat congestive heart failure. The data that is measured by the NICaS ICG and used to treat hypertension, easily transitions physicians into the physiology and treatment of CHF. Our cardiologists are very supportive and anxious to extend the use of the NICaS ICG into our new CHF process. I would like to thank you and your team again for all your support and training of the physicians and staff at PriMed Physicians.

Sincerely,

Douglas E. Romer MD

Director of Medical Quality
Board Chairman
